

MegaH®

The Strongest Known Scientifically Proven Antioxidant Supplement

MegaH contains the active ingredient Silica Hydride, a compound known to have dramatic positive impact on health. Silica Hydride is the only antioxidant that does not become a free radical after neutralizing another free radical.

Dr. Patrick Flanagan has combined the nanotechnology of his Microcluster® and the tiny size of the ionized hydrogen molecule to make Silica Hydride. Scientific testing indicates it to be the most powerful antioxidant known. The comparison chart to the right shows that **Silica Hydride is 8 times more effective** than Green Tea.

The antioxidant capacity of Silica Hydride was also tested more practically with the “Apple Experiment” below. The following test has been performed and replicated by many with the same results.

“Apple Experiment”

This test began with two nearly identical organic apples. Starting with 1 bowl of water, Dr. Flanagan dipped one apple in water for 30 seconds and put it on a paper towel to dry. Then added 1 gram of MegaH to the bowl of water, wrote “H-” on the second apple and dipped it in MegaH water for 30 seconds and put it on a paper towel to dry.

Then Dr. Flanagan put both apples in a dark cabinet for 6 weeks. **Photo 1** and **Photo 2** show what Dr. Flanagan found when he opened the cabinet. **The H- apple dipped in MegaH is significantly fresher than the apple without it.** Then after cutting open the apples, Dr. Flanagan let them sit for 3 days. **Photo 3** shows the difference of MegaH yet again as the plain apple is completely spoiled and covered with mold.
